I found out a few days ago that it's possible to debug the ESP8266 using JTAG (and the Xtensa-specific xt-ocd, or the open source OpenOCD). It looks like work to make this possible has been going on for about a year now, as well as related work to develop UART-based GDB stubs (there's now an official one!

I have the Heltec WiFi\_Kit\_32 version of this amazing module. I cannot get a text display when using the Adafruit\_SSD1306 library. It works with the U8x8 librray, but I have a lot of previous code from other platforms using Adafruit\_SSD1306.h that I would still like to re-use on the ESP32 platform.
