Andreone et al. revealed a key mechanism that explains how the suppression of transcytosis occurs to control BBB permeability. They discovered a single pathway revealing that the lipids transported by Mfsd2a control the formation of caveolae and therefore BBB integrity.

Citations of papers using Endo-Porter are here. What is it and how does it work? Endo-Porter is a novel peptide* explicitly designed to do what all existing peptides and lipid-based delivery reagents can not: deliver substances into the cytosol of cells by an endocytosis-mediated process that avoids damaging the plasma membrane of the cell.

ABSTRACT. With the development of molecular marker technology in the 1980s, the fate of plant breeding has changed. Different types of molecular markers have been developed and advancement in sequencing technologies has geared crop improvement.

Ethylidene dichloride is primarily used as an intermediate in chemical synthesis. Acute (short-term) inhalation exposure to high levels of ethylidene dichloride in humans results in central nervous system (CNS) depression and a cardiostimulating effect resulting in cardiac arrhythmias.
