Paramagnetism is a form of magnetism which occurs only in the presence of an externally applied magnetic field. Paramagnetic materials are attracted to magnetic fields, hence have a relative magnetic permeability greater than one (or, equivalently, a positive magnetic susceptibility).

In this manuscript the experimental methods recently developed to study the mechanical properties of 2D materials are reviewed. A thorough comparison between the mechanical properties of various 2D materials

with very different properties (conductors, semiconductors and insulators) is presented.

Wearable health monitors have recently attracted great attention in academia and industry. In article number 1803165, Huisheng Peng, Xiaosheng Fang, and co-workers develop a novel nanotube-array heterojunction of p-CuZnS/n-TiO₂ on a Ti microwire, which has an excellent UV photoresponse, making it a promising realtime wearable UV sensor.
