Modern Ultra-Supercritical Boiler and Emission Control

- Supercritical (SC) and ultra -supercritical (USC) power plants operate at higher temperatures and greater steam pressures than conventional systems. They require less coal per megawatt-hour, leading to lower emissions per megawatt (including carbon dioxide and mercury), and lower fuel costs per megawatt, leading to higher efficiency and lower fuel

"Status of advanced ultra-supercritical pulverised coal

A supercritical steam generator is a type of boiler that operates at supercritical pressure, frequently used in the production of electric power. In contrast to a subcritical boiler in which bubbles can form, a supercritical steam generator operates at pressures above the critical pressure " 3,200 psi or 22 MPa .
